Desert Spring Eco-Products Launches Next Generation AutoFlush Water conservation and reliability addressed

MISSISSAUGA, ON – Desert Spring Eco-Products Ltd. (“DSEP”) stopped production of AutoFlush model DS-AF5 and is now shipping model DS-AFX, the latest version of the automatic purge/cleaning system for its patented Rotary Disc humidifier.

The new device is based on a pump which replaces the earlier solenoid valve system. According to Kevin D’Souza, V.P. Operations, this change represents an improvement over the former design in two key areas: water conservation and reliability. “The old system relied on gravity which is not as effective as the new pump and it was also susceptible to scale debris becoming lodged in the valve seat which could lead to water leakage”.

The new design uses less water, but is more effective. The flush drains roughly 1 gallon/4 liters, a 33% reduction in volume, but it takes only 45 seconds, half the time of the old model which improves the cleaning action. In hard-water areas it can now be set to flush twice daily without compromising its high water-efficiency status with current water-rebate programs.

The AutoFlush system provides a scheduled purge/rinse cycle for the Desert Spring Rotary Disc Humidifier to remove mineral accumulation. It also assures fresh water is always available for humidification, eliminating concerns over standing water. Routine humidifier maintenance is automated allowing the humidifier to provide maximum output throughout the heating season. Other features include adjustable time interval for different water conditions, selectable summer/winter mode and auxiliary 24VAC power connection for the humidifier motor.

DSEP is a private company with the near-term vision of significantly increasing its presence in the North American whole house indoor air quality market. DSEP currently develops, manufactures, and markets a patented line of premium humidifiers and related products. Distribution of the Desert Spring Rotary Disc Humidifier began in 1997 and has since expanded across Canada and to the United States.
